Kirtan Shrestha

Education

Kantipur Engineering College — Dhapakhel, Lalitpur, Nepal
Bachelor dregree in Computer Engineering (Tribhuvan University) — *Aug 2022 – Aug 2026*

Little Angels' School and College — Hattiban, Lalitpur, Nepal
Higher Secondary Education (NEB) — *Graduated Dec 2021*

License & Certification

Nepal Engineering Council (NEC) License – Computer Engineering — October 2026
Passed — *New Baneshwor, Kathmandu*

MERN Stack Training – Broadways Infosys — June 2025 – August 2025
Full Stack Web Development Training — *Tinkune, Kathmandu*

Personal Details

Name Kirtan Shrestha
DOB 11 September 2003
Email kritanshresthagit@gmail.com
Phone 9869060811
GitHub github.com/KritanShres

Technical Skills

Languages: Python, Java, JavaScript, C/C++
Frameworks: Spring Boot (MVC, Security), Django, Express.js, React.js, Node.js
ML / AI: PyTorch, Hugging Face Transformers & Datasets, Streamlit, Vision Transformers (ViT)
Databases: MongoDB, PostgreSQL, MySQL, Supabase
Developer Tools: Git, GitHub, Postman, Swagger UI, Sourcetree, Render, Vercel

Professional Experience

Freelance Full-Stack Developer — June 2026 – July 2026
Self-Employed — *Work from home*

- Delivered full-stack websites with admin control panels for two independent clients: Himal Saccoss, Illam (Cooperative company) and Illam Baptist Church, Illam, gathering requirements, development, and deployment end-to-end.
- Built responsive frontends in React and backend services in Node.js, using Supabase (PostgreSQL + Object storage) for data persistence and file/media management.
- Deployed backend services on Render and frontend applications on Vercel, establishing a reliable production deployment workflow for both client projects.
- Designed role-based admin dashboards enabling non-technical staff to independently manage website content without developer involvement.

Chronelabs Technologies — Dec 2025 – Mar 2026
Java Web Development Intern — *Lalitpur, Nepal*

- Contributed directly to the HPB (Hepato-Pancreato-Biliary) Disease Management System — a clinical research platform built with Spring Boot + MySQL for backend management and HTML, CSS, JavaScript for the frontend, designed to support medical researchers in tracking and analysing HPB disease data.
- Worked alongside the Senior Developer to implement client-requested features, including new MySQL database tables and their corresponding UI views, taking ownership from requirement understanding through to integration into the existing system.
- Identified and fixed minor bugs in the JavaScript frontend code, and carried out small code refactoring tasks to keep the codebase clean and consistent.

Projects

Digital Pratilipi – Devnagari Text OCR System | *Python, Hugging Face Transformers, HTML/CSS/JS* 2024

- Designed and trained an end-to-end Vision Transformer (ViT) encoder + RoBERTa decoder architecture for Devnagari script recognition, enabling automated digitization of Nepali printed documents.
- Fine-tuned transformer models using the Hugging Face ecosystem (Transformers, Datasets, Trainer API), achieving high character-level accuracy on real-world Nepali document scans.
- Exposed the trained model through a lightweight REST API and built an interactive frontend (HTML/CSS/JS) allowing users to upload images and receive extracted text in real time.

American Sign Language Detection & Classification | *PyTorch, Streamlit* 2024

- Developed and trained a deep learning image classification model in PyTorch to recognise American Sign Language (ASL) gestures across multiple sign classes with 92% accuracy.
- Deployed the model via an interactive Streamlit web application, providing a real-time inference interface accessible to non-technical users requiring no local setup.

Talk-to-Me – Real-Time Chat Application | *Express.js, Node.js, MongoDB, React, Socket.io* 2024

- Architected a full-stack real-time messaging platform on the MERN stack, integrating Socket.io for persistent bidirectional WebSocket communication with sub-second message delivery.
- Implemented room-based chat channels with live presence indicators, user authentication via JWT, message history persistence in MongoDB, and a fully responsive React UI.

Resume.io – AI-Powered Resume Builder | *React, Express.js, Node.js, MongoDB, TailwindCSS, Google Gemini* 2025

- Built a full-stack resume builder on the MERN stack supporting multiple resume templates, real-time live preview, color customization, and PDF export via browser print dialog.
- Integrated Google Gemini 2.5 Flash through an OpenAI-compatible proxy to power AI enhancements for professional summaries and job descriptions, and to parse uploaded PDF resumes into structured form fields.
- Implemented JWT-based authentication with HTTP-only cookies, profile image hosting via ImageKit, and a public resume sharing feature accessible via shareable links without login.

Evento – Event Organization Application | *Express.js, Node.js, MongoDB, React, TailwindCSS* 2024

- Building a full-stack event management platform (MERN stack) supporting event creation, participant registration, role-based access, and real-time attendee notifications styled with TailwindCSS.

Workshops & Hackathons

CodeCampNepal (Co-Founder) – "Free Education for All"

- Co-founded CodeCampNepal alongside two friends with the mission of providing free technical education to students across Nepal. Organised and delivered 4 workshops in total as organiser, instructor, and mentor.
- **Mobile App Development Workshop** – Organised and conducted a hands-on mobile development workshop for junior students at Kantipur Engineering College.
- **Git & GitHub Workshop** – Organised, conducted, and mentored a version control workshop covering Git fundamentals and collaborative GitHub workflows at Kantipur Engineering College.
- **Introduction to Python with Django** (in collaboration with IT club CCRC) – Organised, conducted, and mentored a web development workshop for +2 level students at CCRC College, covering Python basics, Django ORM, and REST API fundamentals.
- **Introduction to Python** (in collaboration with Padmakanya IT Club) – Organised, conducted, and mentored a Python fundamentals workshop at Padmakanya Multiple Campus (PKIT).

Hackathons

- **KEC Hackalite 2024** (Team: Project Quad) – Developed Sambandha, a web platform connecting small-scale local businesses with freelance market analysts to deliver actionable, data-driven growth insights; responsible for the UI/UX design and frontend development of the platform.
- **DAV Code Fest 2025** (Team: HackPack) – Developed InsightGenie, an AI-to-BI SaaS platform that automatically generates visual sales dashboards and natural-language insights for local vendors; personally responsible for database architecture and AI model integration within the platform.
